## Brush Assembly Evaluation, June 2015

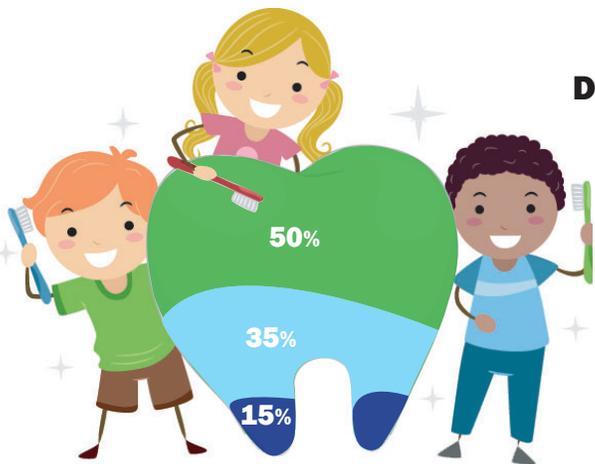

An electronic survey was sent to the teachers who scheduled the Brush Assembly. Twenty-two performances were presented to Allen County, Indiana, school children in grades Pre-K through 5th grade. The Assembly was presented to 4,572 children, 373 teachers, and 16 parent chaperones.

Results were overwhelmingly positive, with 94% of teachers indicating the assembly was above average or exceeded expectations and 100% of teachers indicated the assembly format was an effective way to teach youth about oral health. Fifteen percent of the teachers surveyed did not teach oral health in any way in their classrooms, while another 50% indicated they teach about oral health “somewhat.”

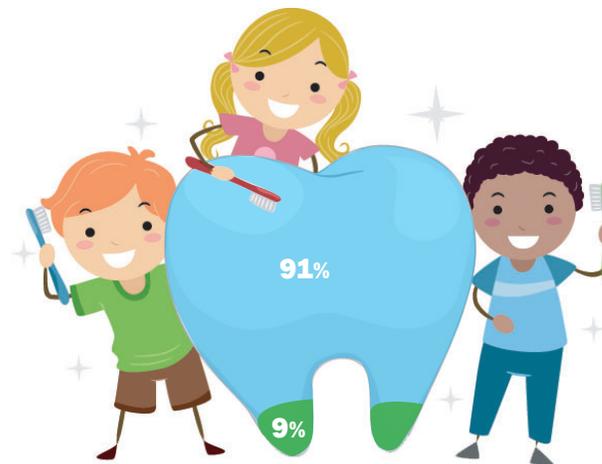

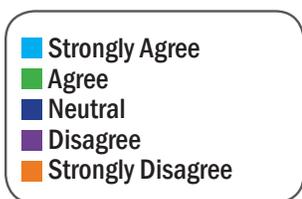

### Your Overall Experience With The Brush Assembly

### Do you teach about oral health in your classroom?

### I feel the assembly was an effective way to teach children about oral health

## Teacher Comments

- “It was wonderful! It kept the children’s interest and they really enjoyed it. Loved having the book to read before the program. It helped keep the children engaged.”
- “The students talked about it for several days after. That doesn’t always happen.”
- “The principal wanted to know if this would be offered next year and would our students get to see the program again? Staff all said they thought it was very well done. “
- “As an adult, even I truly enjoyed the book and the connection it made to the live program.”
- “The kids were engaged and interested. That is a very hard thing to do with children, so great job. I thoroughly enjoyed the program and thought that it was fantastic!”
- “The assembly was very well done and we would gladly welcome them to our school again.”
- “I like the characters that keep the students attention, instead of a teacher, or doctor trying to explain to them it was on their level.”
