

In Partnership with the **DELTA DENTAL FOUNDATION**

2022 Brush Oral Health Program Evaluation for Children's Resources

Brush offers curricula and educational resources which early childhood educators, home visitors, and WIC staff can implement all year long, with support from McMillen Health. We advocate for the establishment of a dental home by age one and promote oral health education for all who influence a child's health status, including parents, caregivers, educators, and health practitioners. Brush provides educational and developmental experiences that improve the health and school readiness of underserved children. In 2020, we began offering all our resources digitally.

99% of Participants rated their experience with the training as very good or excellent (56%).

Serving Nationwide*

2,125,670

*Nationwide numbers include Brush Program, Curricula, and WIC Oral Health Project

What People are Saying

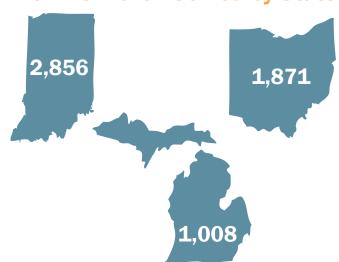

"I appreciated her knowledge in the area of Dental Health. She gave a lot of insight about the importance in caring for teeth and how our health in our primary teeth affects the health of our adult teeth."

"Many of our clients are among the populations most at risk. This will allow us to better address the importance of starting new habits TODAY, and teach them how."

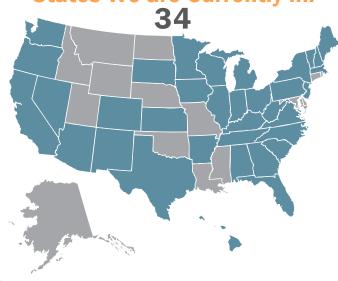

"I loved learning how to better help explain things to parents. Normalizing things that we once believed to be true that aren't true."

2022 *Brush* for Adults with Chronic Health Conditions Evaluation

In 2020, McMillen Health partnered with the Michigan School of Dentistry and Depression Center to develop *Brush* for Adults with Chronic Health Conditions. The resources include a flip chart, handouts, and eight low-literacy oral health videos which are viewed through QR Codes. These resources were designed for Peer Support Specialists serving adults with life long chronic conditions including mental health, drug use, diabetes, and more.

100% of Participants never received oral health training prior to *Brush* for adults with chronic health conditions.

Serving Nationwide*

206,557

*Number of adults with chronic health conditions served by trained professionals as of December 2021.

100% of Participants rated their training as excellent.

What People are Saying

"I will utilize this with my recoverees who have oral health as a barrier to their recovery and would benefit from being educated and empowered about their own dental care."

"I really liked getting the information I wasn't aware of, and realized I need to make changes in my own dental health practices."

"I liked how stigma was integrated into the importance of good oral hygiene and how it can affect someone's self-esteem."
